CS225 Project Style Guide

Ethan Hammonds

Jacob Jeffcoat

- **Variable & Function Names:**

  - All variables, classes, and functions will use camel case.
  - Variables will use lower-case for the first letter in the variable.
    - variableName
    - total
  - Functions and Classes will use upper-case for the first letter:
    - MyFunction()
    - MyClass
  - Variable/function names must also make sense and should be readable/self-explanatory.

- **Curly Braces:**

  - Curly braces will be on their own line. If there's a single line being executed in the if statement or loop, then curly braces are not needed.

- **Code Comments:**

  - Comments explaining what a single line of code does will be made right next to the line in question.
  - Comments explaining what functions or chunks of code do will be made directly above just above the function or chunk.
